Project Brief

Purpose

The purpose of this website is to provide information about a local community garden group and make it easy for community members to learn about the garden, participate in events, volunteer, and contact the organization. The site should create a welcoming and approachable experience while clearly communicating the group's activities and resources.

Audience

The primary audience is local community members who are interested in gardening, volunteering, attending garden events, or learning more about the organization. The secondary audience includes current garden members, potential volunteers, and people looking for information about community gardening.

Primary User Tasks

Users should be able to:

- Learn about the garden and its mission.
- View the upcoming events and activities.
- Learn how to volunteer or become involved.
- View information about gardening programs and resources.
- Find contact information and submit an inquiry.
- Navigate the website easily on desktop, tablet, and mobile devices.

Constraints

- The website will be created using majority HTML and CSS, with little to no Javascript.
- The design must be responsive across wide, medium, and narrow screen sizes.
- Content should remain easy to scan and understand.
- Images should be optimized for web use.
- The website should use good color contrast, typography, navigation, and form elements.

HTML/CSS Scope

The project will include semantic HTML elements such as header, nav, main, section, article, footer, headings, lists, links, images, and forms.

CSS will handle the responsive layout, typography, spacing, colors, navigation, cards, buttons, forms, and image presentation using Flexbox, Grid, and media queries.

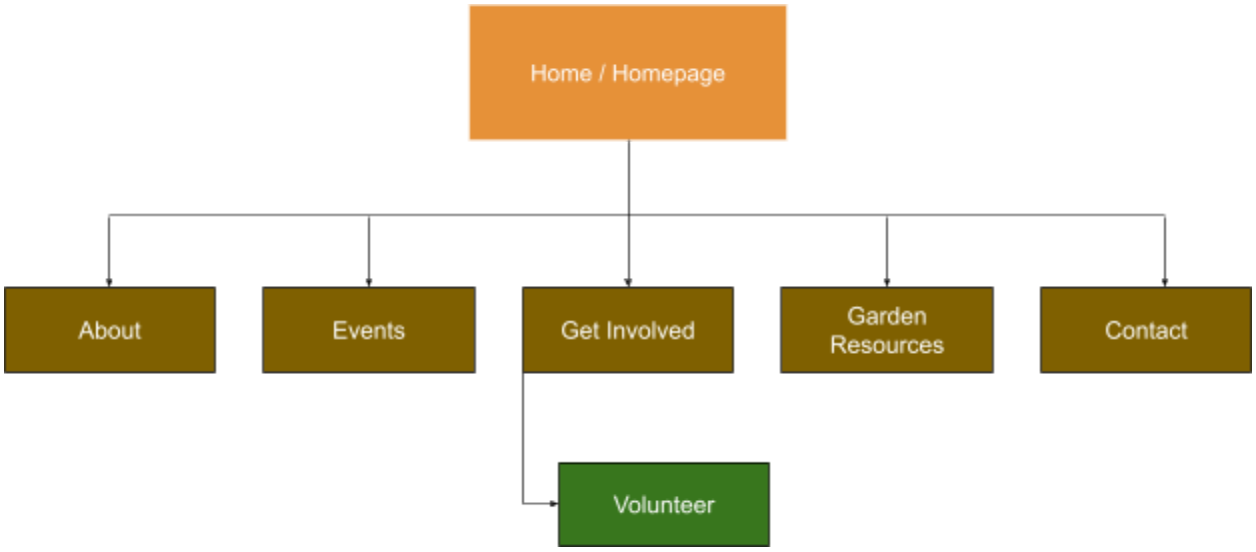

Content Inventory

Content Item	Format	Source	Status	Risk
Garden mission	Text	Created for project	Ready	Low
About the garden	Text + Images	Created for project	Ready	Low
Upcoming events	Text / Cards	Created for project	Draft	Medium
Volunteer information	Text	Created for project	Ready	Low
Gardening resources	Text + Links	Created / Researched	Drraft	Medium
Garden photos	JPG / PNG	Original Pictures / Free images	Needed	Medium
Contact information	Text	Organization Information	Ready	Low
Contact form	HTML form	Created for project	Ready	Low
Navigation labels	Text	Site planning	Ready	Low
Footer information	Text / Links	Created for project	Ready	Low
Logo/identity	SVG / PNG	Created for project	Draft	Medium

Content Risks

The main content risks are having incomplete event information, inconsistent images, and using images that are too large for the web. Any images or resources will need to be checked for usage rights before the website is shown for the public.

Site map and page requirements

Page Requirements

Page: Home
Purpose: Introduce the garden and encourage participation
Required Content: Hero, mission, featured events, CTA, and garden images

Page: About
Purpose: Explain on who the organization is
Required Content: Mission, history, garden information, and images

Page: Events
Purpose: Show upcoming events
Required Content: Event cards, dates, descriptions, and location

Page: Get Involved
Purpose: Explain ways users can participate
Required Content: Volunteer information, members / community opportunity, and CTA

Page: Garden Resources
Purpose: Provide useful gardening information
Required Content: Gardening tips, resources, links

Page: Contact
Purpose: Allow users to reach and the organization
Required Content: Contact information, form, location information

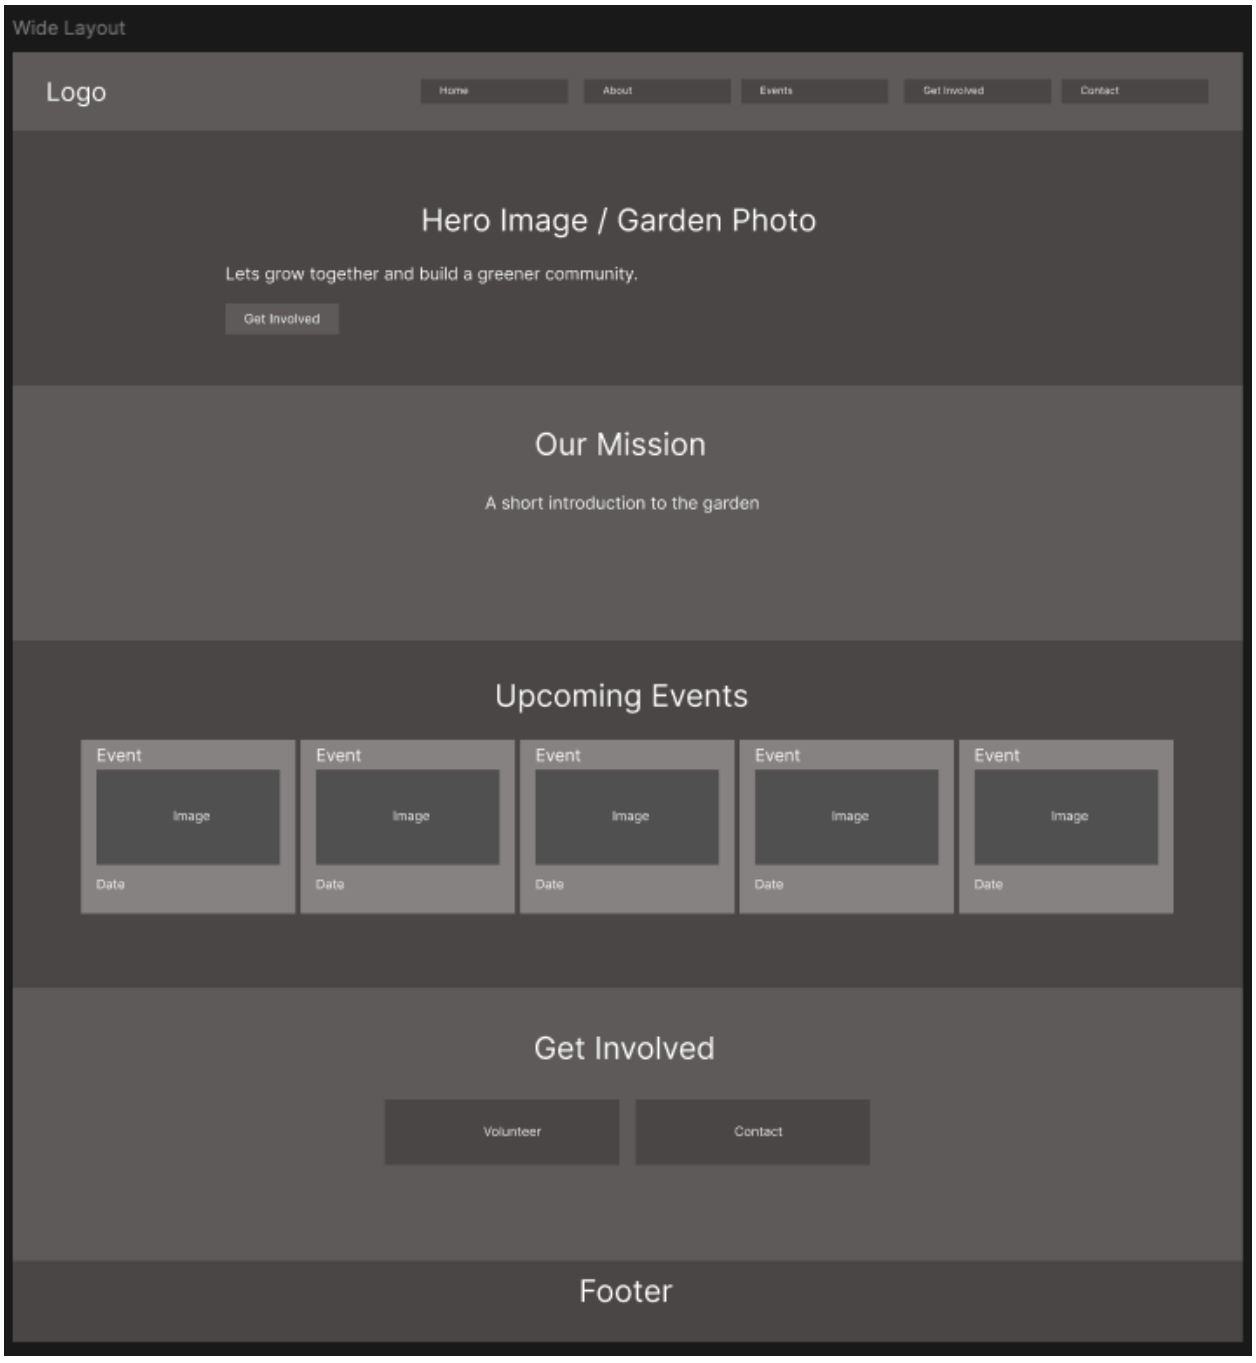

Shared Component

These components appear in multiple pages:

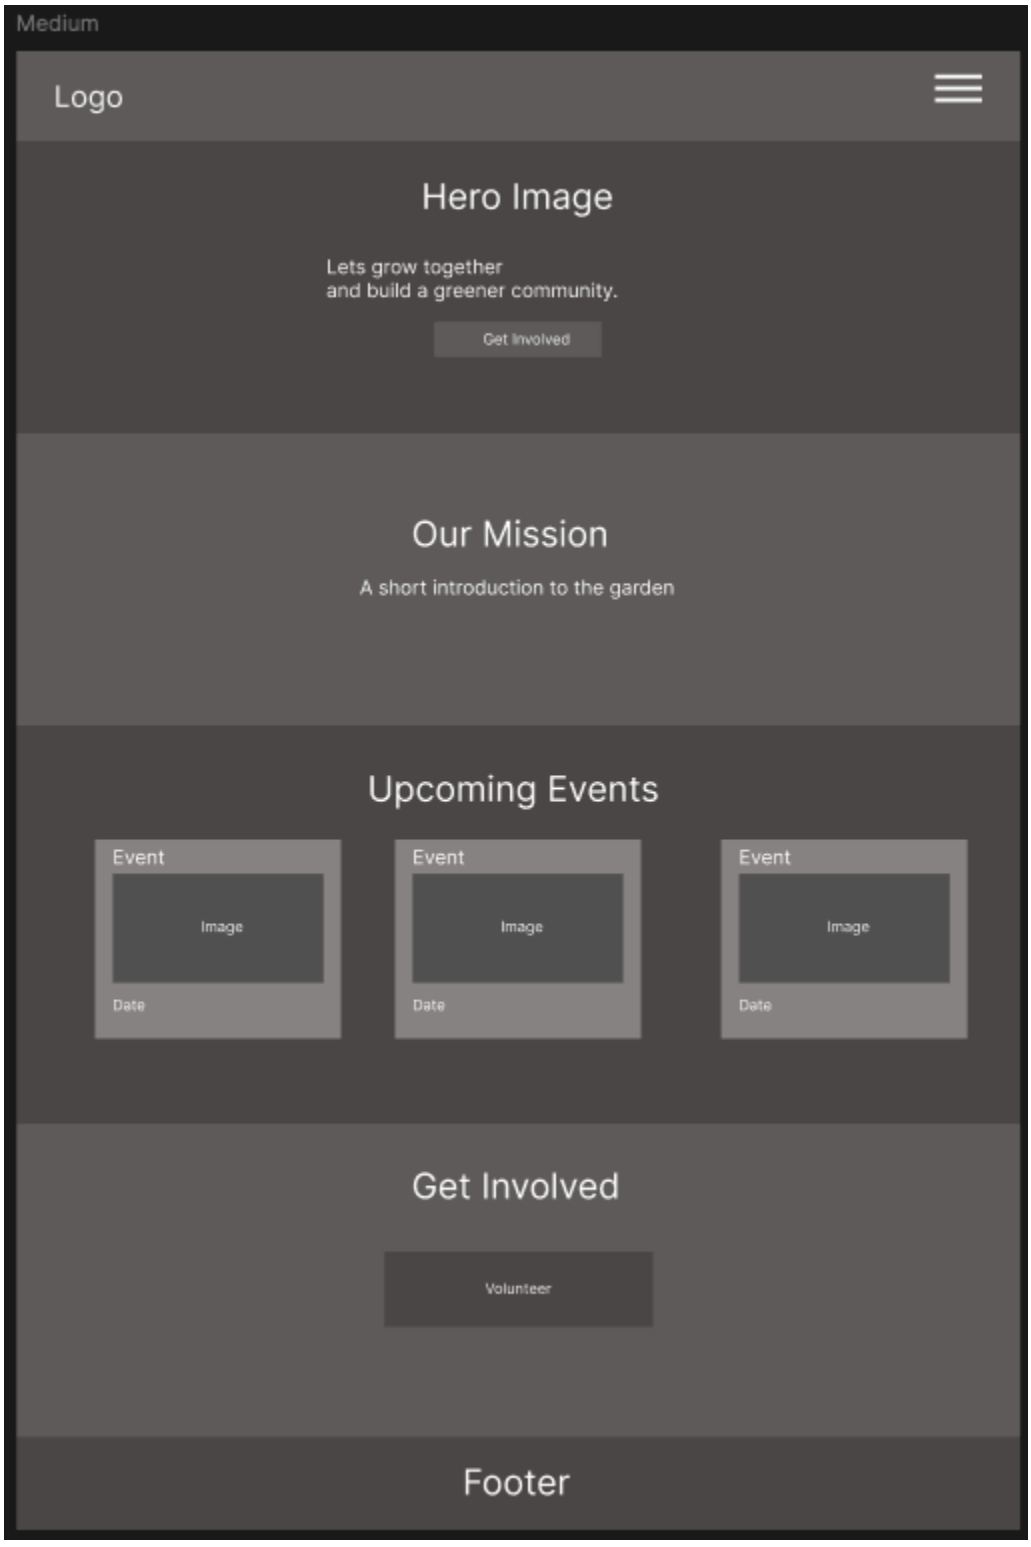

- Header
- Logo
- Primary Navigation
- Mobile Navigation
- Page heading
- Buttons / CTA links
- Footer
- Social / Contact links

Responsive wireframes

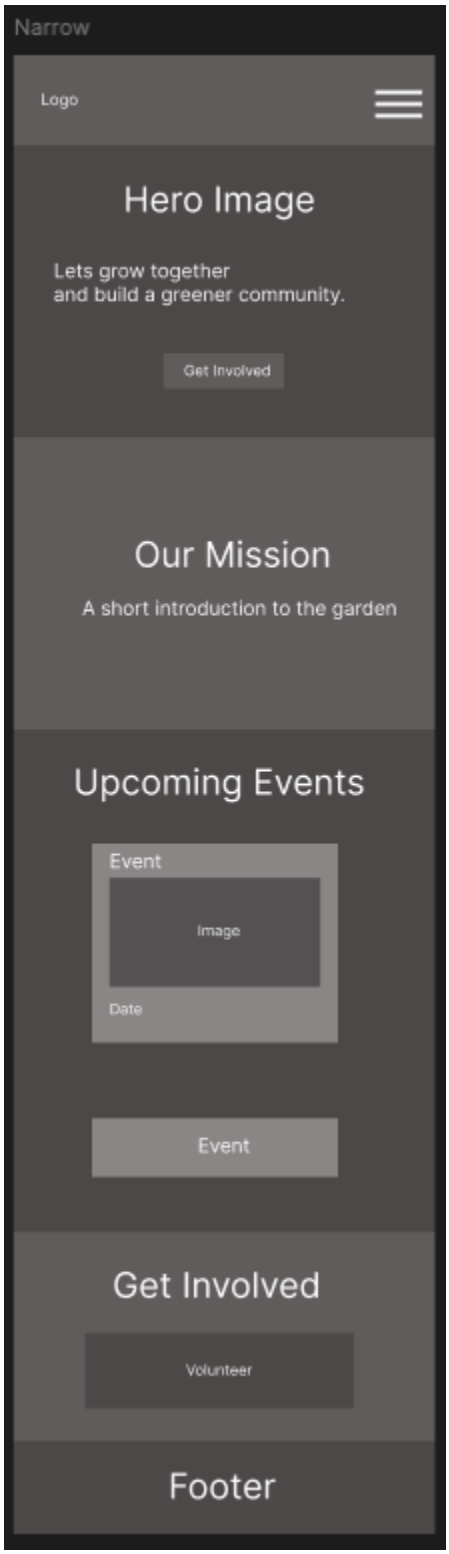

Wide Layout

Medium Layout

Narrow Layout

Behavior annotations

Navigation

- On wide screens, the primary navigation will display horizontally in the header.
- On medium and narrow screens, navigation will collapse into a menu button.
- The logo will remain visible at all screen sizes.
- Navigation links will have visible hover and keyboard-focus states.

Layouts

- The three column event layout on wide screens will change to two columns at medium widths.
- Event cards will stack into a single column on narrow screens.
- Content containers will use flexible widths rather than fixed page widths.
- Horizontal padding will decrease on smaller screens to keep showing the usable content space.

Images

- Hero and content images will scale to the width size.
- Images will use appropriate alt text when they convey information.
- Decorative images will use empty alt attributes when appropriate.
- Images will not cause horizontal scrolling on a smaller screen.

Forms

- The contact form will use clearly labeled fields.
- Required fields will be identified.
- Form controls will remain large enough to interact and be seen.
- Validation or error will clearly communicate what needs to be corrected.

Cards

- Event cards will use a consistent structure for image, title, date, and description.
- Cards will change from multiple columns to fewer columns as the viewport becomes smaller.

Footer

- The footer will remain at the bottom of each page.
- Footer links may change from a horizontal arrangement to a stacked arrangement on narrow screens.

Special States

- If there are no upcoming events, the events section will display a message instead of an empty card layout.
- Form errors will be easily detected and communicated through text rather than color.
- Links and buttons will have clear hover and focus states.

Acceptance criteria

Responsive Behavior

1. When the viewport is resized from wide to narrow, the website must change from multi column layouts to stacked content without horizontal scrolling so that all content remains usable on mobile devices.

2. When the viewport is at a narrow width, the primary navigation must collapse into a mobile-friendly navigation control so that navigation remains accessible without overcrowding the header.

Accessibility

1. When a visitor navigates the site using a keyboard, all interactive elements must be reachable in a logical order and have a visible focus state so that the site can be used without a mouse.

2. When meaningful images are displayed, each image must have descriptive alternative text and all form controls must have associated labels so that assistive-technology users can understand the content and controls.

Browser Support

When the website is opened in current versions of Chrome, Firefox, Safari, or Edge, the main navigation, pages, forms, images, and responsive layouts must be functional, with a fallback styling or content used when an extra CSS or browser feature is unsupported so that users can still access the sites core information.

Performance

When a user opens any primary page, the page must load its essential content without loading the large images or files so that users can quickly access information about the community garden.

Metadata

When a search engine is listing each primary page, the page must include a unique descriptive title, meta description, and relevant heading structure that identifies the community garden group and the page's purpose so that users can understand the page from search results.

Release Quality

When the website is reviewed before release, all navigation links, buttons, images, forms, responsive layouts, and major content must function as intended without any errors so that the site is ready for public use.

AI disclosure

No AI tools were used in the development of this project planning.
